taskiem

INVESTOR PRESENTATION · 2026

Run your business from WhatsApp.

Automation Nigerian businesses can trust with their money, from the corner shop to the regulated lender.

Made in Lagos · Prices in naira · Hosted in Nigeria

THE PROBLEM

A business owner's day goes on chasing, checking and paying, by hand.

Chasing debtors

One WhatsApp message at a time, from memory, every week.

Checking transfers

Did it land? Was it reversed? Goods leave on a screenshot.

Paying people

Salaries and suppliers sent one transfer at a time, with no second check.

Keeping records

A notebook and three apps that never add up at closing time.

The tools built for this were built for someone else: priced in dollars, sold per task, made for a desktop, and blind to Paystack, Moniepoint and OPay.

Tens of millions of businesses, and they already live in one app.

39.6M
micro, small and medium businesses in Nigeria

~46%
of Nigeria's GDP comes from them

96.9%
are nano or micro businesses, run by the owner on a phone

95%+
of Nigerian internet users say they use WhatsApp

Digital payments are now normal: Paystack, Moniepoint, OPay and the banks move the money. **Nobody connects those payments to the rest of the business.**

Sources: SMEDAN/NBS National MSME Survey (2020 data); PwC Nigeria MSME Survey 2024; Statista, social media use in Nigeria, Q3 2024.

THE SOLUTION

Tell Taskiem what to do. It does it every day, whether you remember or not.

01

Say it

In English or Pidgin, typed or as a voice note. Or pick a ready-made workflow.

02

Connect once

Paystack, Moniepoint, OPay or a Google Sheet. One screen, one key, sealed away.

03

Approve and go

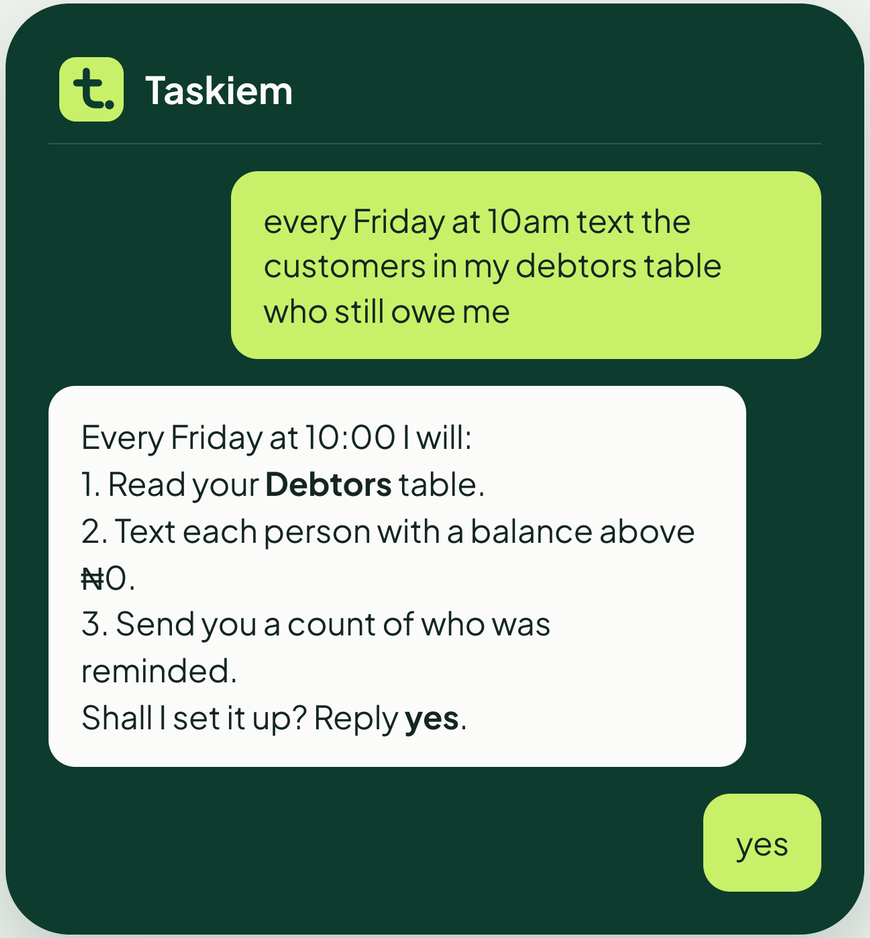

Taskiem reads back exactly what it will do and who it will message. Say yes.

HOW IT FEELS

One message becomes a workflow.

The owner describes the job in their own words. Taskiem drafts the steps, reads them back in plain language, and starts only after a **yes**.

From then on it runs on its own, and every run is on record.

FEATURE · CHAT-FIRST

WhatsApp isn’t a notification channel. It’s the whole app.

WhatsApp

Build, run, check status and approve payouts with buttons and a PIN. A business can use its own number.

Telegram

The same commands and approvals for owners who prefer it.

USSD

Menus on a short code for customers and agents on feature phones.

Web app

Visual builder, run history, tables, team roles. Works at phone width.

Local languages

English and Pidgin; Yoruba, Hausa and Igbo in native-speaker review. Voice notes in beta.

The whole team

Add staff by phone number. Accountants see; managers approve up to a limit.

FEATURE · AI THAT BUILDS AND REPAIRS

The AI drafts and fixes. People decide.

Build from words

Plain request in, a checked workflow out: drafted from our template library, validated, dry-run, with tests generated, saved as a draft for review.

Repair failed runs

Explains what broke, tries a fix on a safe copy of the run with real inputs, and shows the evidence. One click to publish and resume.

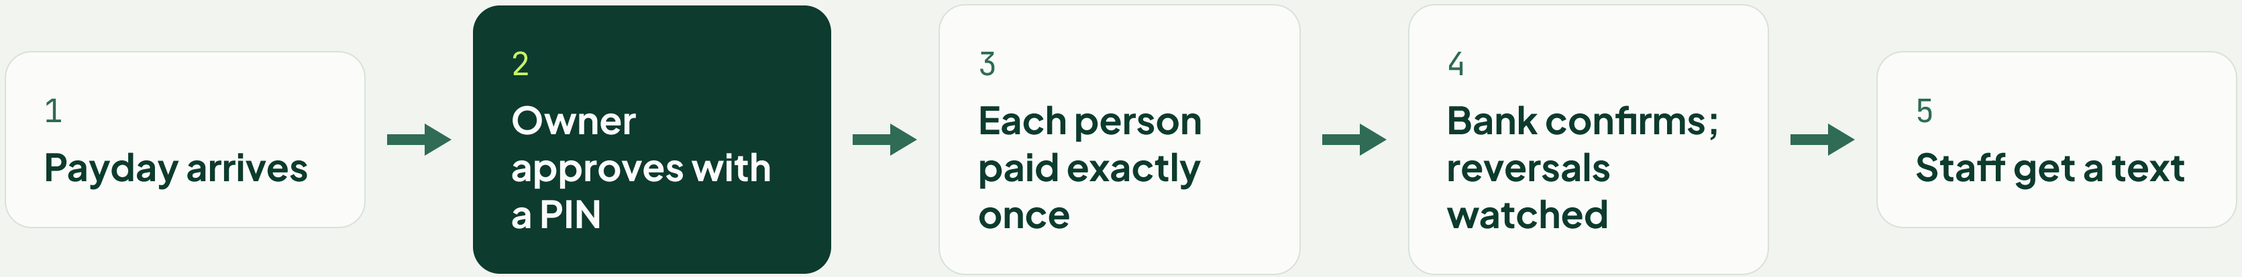

Hard guardrails

The AI can never publish, approve, read secrets or move money. Personal data is removed before any prompt. Spend is budgeted per business.

Model-agnostic, Claude by default. Every prompt and model change must pass a **200+ request evaluation suite** before it ships.

FEATURE · PAYING PEOPLE

Payroll, suppliers and refunds, on whichever bank rail the business already uses.

One template, any rail

Templates ask for “a connection that can pay a bank account”. The business picks Paystack, Moniepoint, Flutterwave, iswallet or one of 15 money rails.

Approvals that match the business

Amount rules, several approvers, escalation and delegation, a PIN or passkey, and no one approving their own request.

FEATURE · GETTING PAID

Invoices that mark themselves paid.

Each invoice gets a **Pay by bank transfer** button that issues a one-time account number. The payment matches by its reference, so it lands on the right invoice even after the number expires.

Invoices with VAT

Numbered, sent by WhatsApp, SMS or email, chased automatically until paid.

A money log nobody can edit

Every payment, payout, refund and POS sale written once. Corrections are new rows.

Matching with reasons

Exact matches by reference; suggestions for the rest; overpayments flagged.

FEATURE · RECORDS AND A FRONT DOOR

Everything a small business needs, without a spreadsheet or a website.

Your records

Debtors, stock and staff as tables. Add or find a row from WhatsApp, import a CSV, edit in a grid. Workflows read and write them.

Your page

Say **make my page**. Get a storefront with products, bookings, a Pay button and a QR card. Orders arrive in chat to accept.

Hosted forms

A form can start a workflow, or ask someone for input halfway through one, with SMS or email verification.

Field agents can sign businesses up in person; the owner agrees from their own WhatsApp. Pages can run on the owner's own domain.

FEATURE · READY-MADE AREAS

Whole products for whole industries, switched on in the same account.

Schools

- Every student gets their own account number
- A parent’s transfer lands on the right child by itself
- Term invoices, receipts, a family page with no login
- Gentle chasing, payment plans, a gate list with no amounts

POS terminals

- Moniepoint and OPay terminal sales, as they happen
- Instant alert when a payment fails or reverses
- Takings per terminal and an end-of-day cash-up
- Records an accountant or bank will accept

58 ready-made workflows today, grouped by the owner’s problem: money in, money owed, money out, customers, stock, storefront, schools and POS.

TRUST · BUILT LIKE BANKING SOFTWARE

Designed first for banks and lenders. Every shop gets the same protection.

Done once, never twice

If the network drops or a server restarts, a payment is never sent twice.

Maker-checker

Money steps wait for approval; four eyes on publishing changes to live workflows.

Tamper-evident audit

Every approval, payment and change on a chained log an auditor can verify.

Private by default

BVNs, phone numbers and balances hidden in logs and never sent to the AI.

Sealed keys

Credentials encrypted and never shown again; customers can bring their own key.

Isolated tenants

Separation enforced inside the database itself, built for Nigerian data residency.

FOR FINTECHS AND SAAS

Taskiem inside your product, under your brand.

Lenders, payroll companies and banks embed Taskiem so their customers get approvals, payouts and reminders. The end customer never sees Taskiem; the partner keeps the relationship.

Need	What Taskiem gives
Embed it	Builder as a web component, white-label themes, custom domains
Run it for many	Sub-accounts per customer, partner API, shared audit trail
Code it	TypeScript SDK, CLI, workflows in Git, staging environments
Govern it	SSO, SCIM, custom roles, passkeys
Host it	Our Nigerian cloud, a dedicated stack, or self-hosted
Extend it	A public connector SDK and review process

INTEGRATIONS

37 connectors, Nigerian first.

Payments and banking	Paystack · Flutterwave · Moniepoint · Moniepoint POS · OPay · OPay Business · Interswitch · Remita · Lenco · Anchor · Breet · iswallet · Mono · MTN MoMo · M-Pesa
Messages	WhatsApp · Telegram · Termii · Africa's Talking · Gmail · Slack · Email received
Identity checks	Dojah · Prembly · Youverify
Data and files	Google Sheets · Xenibase · PostgreSQL · MySQL · Amazon S3 · SFTP
Products and Taskiem's own	Payrolla · Invoices · Schools · Storefront · Forms · Tell me

Each is built from the provider's public documentation and tested against recorded fixtures. A public SDK lets Nigerian service providers add their own.

BUSINESS MODEL

Flat monthly plans in naira. Never a charge per run.

Starter Trader

₦15,000

a month · 10 workflows · 10 tables · AI builder · for one owner

Growing Business

₦45,000

a month · unlimited workflows · 50 tables · Git · for teams

Enterprise & Regulated

₦180,000

a month and up · sales-led · embedding, BYOK, dedicated

1 · Design partners convert to paid Business and Enterprise plans.

2 · SMEs through WhatsApp sign-up and field agents in a pilot market.

3 · Embedded tier opens to fintechs and SaaS companies.

WHY WE WIN

No one else combines all five.

What the business needs	Taskiem	Global automation tools	Local single-purpose apps
Set up and run from WhatsApp	**Yes, the main interface**	No	Sometimes, for alerts
Nigerian payment rails built in	**15 rails**	Few or none	Usually one
Money moves exactly once, with approvals	**Core of the engine**	Not designed for it	Varies
Flat price in naira	**Yes**	Dollars, priced by usage	Naira
Embeddable and white-label	**Yes**	Limited	No

WHERE WE ARE

The product is built. Launch now depends on accounts, partners and people.

Built and tested

- Durable engine, approvals, audit chain
- WhatsApp, Telegram, USSD, web app
- AI builder and repair, with evaluation suite
- 37 connectors · 58 templates
- Billing in naira, self-serve onboarding
- Embedding, white-label, BYOK, Helm
- Storefronts, forms, invoices, Schools, POS

Next, to launch

- WhatsApp Business number and approved templates
- Nigerian cloud region and first deployment
- Paystack merchant account and terms of service
- Production AI model account
- Two design partners; first pen test
- Launch gate: 10 paying customers, 99.9% uptime for 60 days

THE TEAM

Made in Lagos by the team behind Xenibase.
