taskiem

POSITIONING BRIEF · OCTOBER 2026

Run your business from WhatsApp.

Taskiem handles the repetitive, money-touching work of a Nigerian business. You ask for something in your own words, it shows you what it will do, and after you say yes it runs every time without needing a reminder.

For **Nigerian business owners who run everything from their phone**, Taskiem is **the automation service you set up by chatting**. It chases debtors, thanks customers, pays staff after you approve, and records every naira. Global automation tools are priced in dollars per task and built for a desktop. Taskiem is **priced flat in naira, connected to the payment services you already use, and built so money moves exactly once**.

WHO IT'S FOR

PRIMARY

The SME owner on a phone

Traders, shops with POS terminals, restaurants, salons, distributors, private schools. Paid by transfer and POS, keeps records in a notebook.

SECONDARY

Fintechs and SaaS

Lenders, MFBs, wallets, payroll and accounting tools that need safe money flows, or want to embed automation under their own brand.

THE PROBLEM

Nigeria's 39.6 million small businesses spend their days **chasing debtors, checking that transfers really landed, paying people one by one** and reconciling at night. The tools that automate this were built for someone else: priced in dollars, made for laptops, and not connected to Paystack, Moniepoint or OPay.

WHY TASKIEM: THREE PILLARS

You talk to it

WhatsApp is the whole app. Build, run, check and approve in a chat, in English or Pidgin, typed or as a voice note.

Built like banking software

Payments wait for your yes and happen exactly once, and every action goes on a record that can't be quietly changed.

Nigerian by default

Flat naira plans with VAT. 15 local money rails, identity checks and SMS services built in. Designed to keep data in Nigeria.

PROOF POINTS

- **58 ready-made workflows**: debt reminders, receipts, payroll, POS cash-up, school fees
- **37 connectors**: Paystack, Flutterwave, Moniepoint, OPay, Remita, Dojah, Termii, Google Sheets
- **An AI that drafts and repairs** workflows but can never approve or move money
- Invoices that mark themselves paid, a money log nobody can edit, storefronts, forms
- Embedding, white-label, SSO and bring-your-own-key for regulated partners
- Flat plans: **~~₦15,000~~ · ~~₦45,000~~ · from ₦180,000** a month. No charge per run.

MESSAGING BY AUDIENCE

Run your business from WhatsApp.
Headline, every SME channel

Say it. Connect once. Approve and go.
How it works, in three beats

Nothing moves without your yes.
Trust, for owners

Automation you can trust with money movement.
Fintechs and regulated teams

Taskiem inside your product, under your brand.
SaaS and partners

VOICE

Do: plain words, one idea per sentence, talk to one person ("your customers", "you approve"). Say what it does. Nigerian by default: naira, BVN, Pidgin.

Don't: "AI-powered", "seamless", "leverage", "empower", "revolutionise". No claim without a page that proves it. Use "workflow" once per page, explained.

DON'T CLAIM YET

The WhatsApp number, Nigerian hosting, Yoruba, Hausa and Igbo, "certified" or "bank-grade certified", 99.99% uptime, and customer numbers or stories. Voice notes are **beta**. Each one goes public only when the claims register says it is true.

Taskiem is a working name, pending a trademark search.

Market figure: SMEDAN/NBS National MSME Survey (2020 data). Product facts: Taskiem repository, 26 October 2026.
